

14-30-B-1 ALMANACHNO

VVM-PETRIPITATI VERONENSIS

Mathematici, Superadditis annis quincy supra ultimas hactenus in lucem editas Ioannis Stoefferi Ephemeridas. 1551, adfuturum Christian.

num. M. D. LVI.

Isagogica in coelestem Astronomicam disciplinam.

Tractatustres perbreues de Electionibus, Revolutionibus annorum. & mutatione aeris. Itemhorariæ Tabulæ per altitudinem Solis in die ach

larum in nocte ad medium fexticlimatis.

Omnibus bis diligentifime recognitis er emendatis.

M. D. XLIIIL MOR.

A dest etiam candidisime lector feorfum impressum Ephemeridum supplementum autho ris eiusdem, in quo primi mobilis Tabula Ascensionum gradibus, atq; Zodiaci per minuta queq; fingulariter inferuientes . Ortus , or occafus , coliq; mediationes tam fella= rum fixarum, quam planetarum latitudinem utrang; poßidentium . Directionum quoq; tabulæ cum expeditißima positionis circultinuestigatione cum latitudine, nel sine. Costia gata demum passionis Dominice, breuisq; admodum calendarije formationis Epitome. Que omnia unico hic uenali codice exhibentur.

Angeli Angelotij Camertis.

PROOEMIVM.

PHEMERIDES noftras annorum quinck.: 1552.: 1553.

1554.: 1555.: 156. quas modopracedentibus adiccimus, non ad Tubinge meridiem (urpriores) uerum ad Venetiarum urbis longitudinem exactifitmo calculo elaborauimus. Haceftenim Venetica, acç marcitimo regionis, nec minima partis Gallia cifalpis me, nedumparize noftra domina, & alumna, urbium facile prins.

ceps, ac totius fere orbis celebratissimum emporium, Hacest (ut dicitur) urbs illa auridiues, sed ditior fama, potens opibus, sed uirtute potentior, solidis fune data marmoribus, sed solidiore etiam fundamento ciuilis concordiz stabilita. falfiscin ta fluctibus, fed falfioribus tuta confilis. Hac urbi acpatria noftra inclyta ufqueadeo clementiffime moderatur, eandem sapientiffime, uturbes alias regit, att gubernat, ut non minori eam dilectionis affectu amplexari uideatur. quam olim Romano senatui, Oftauio quoca ac Galeno Imperatoribus pergrata fuille tradatur, a quibus olim Romana colonia (quod uetustum in porta Burfari Verona cognominata epigramma testatur) non indigne quidem effici meruit, ua rijs quidem ac pluribus ornamentis, atq nobilifimor u edificiorum monumetis exornaça. Quibus omillis (quandoquidem innumeras illius, ac patrix nostra lau des, acce antiquissima ipsius adificia, uel ea etiam, qua regum, ac principumues tustas sedes tum Pipini, tum Theodorici huius Gothoru, illius Italiae regis testans eur, nostræ non est mentisenarrare, quæ duobus alijs relinquo, quorum alter hæc cluis nofter non uulgari oratione descripsit, atqualter ex Germania licet oriundus, Veronæ tamen alumnus mrasce huius. f. acq illius laudes non inferiori forsitan Ascrao, carmine cecinit) Ephemerides nostras dicimus ad longitudinem compus tatas graduum triginta quatuor cum dimidio fere ab occidente habitato, qua Ve

netiarumurbi cosmimerrarum emensione sub latitudine graduum quadraginta quinty, minutorumfexdecim, Veronæ quoce non minus congruenti compenfatur, a Tubinga meridie (ad quem pracedentia ad annu usch. 1 5 51. diaria coma putantur (per minuta quatuordecim horaru, uel propediftans, ater a Toleto) una de Alphonfiradices in coeleftibus motibus assumuntur) gradibus uigintitribus. acminutis triginta fereex æquinoctiali, quibus hora una minuta triginta quatuor correspondent. Quibus abannisintegris 1 5 51. surreptis, atog abætate Christiper Alphonsi tabulas ex planetaru motibus sumptaradice, per ipfarum canones relia qua operantes, ad prædicti urbis Veneræ meridiem æqualis scilicet atog astrono. mici diei exordiu (nulla hicproprerea addita, uel diminuta æquatione dieru, alian in confunctionibus luminarium arque planetarum radiationibus superaddira) quosque cœlestes motus, solisce aclunæ coitus cumoppositionibus ueris & inæ qualibusqu'am syncerissime suppurauimus. Quod si modo Ioannis Stoesteri supputationes iniplius Ephemeridium præcedentium annoru descriptionibus a no= ftrisper minuta, to. horarumfine plus modo, uel minus dinerfificari videantur, atqueideo planetarum motus, fiue etiam coiunctiones luminarium, atque oppos litiones per tantum temporis spatiti præueniant, ac nostræ non minus tantundem tardiores appareant, ne mireris quæso, quandoquidem ipsi in æquinocti annoeatione, atos oppolitionibus luminarium in paschali tabula per ipsum in nouo Romano calendario descriptis, a Pauli episcopi Forosempronientis, ac nostra cas lendarij reformationis computatione per Alphonsi tabulas diligentissime exast minata, per tantum temporis spatium præueniendo discrepat. Anno nance Chris stidomini. 152 o, ubi nos cum præfato Paulo aquinostium uernum, siue introis tum solis in primum Arietis punctum ad meridiem urbis Romæ decimo Martin die horis. 3. minutis. 28. notauimus, atc; anno altero. 1 521. horis. 9. mi. 17. post prædictæ urbismeridiem idipfum collocauimus. Ille hochoris. 8.mi. 3 6.atcg als teruhor. 2. mi. 47. post Tubingæmeridiemstatuit. Quibus modo adhibitis mis nutis, 2 3, horarum differentiæ meridianorum Romæ, & Tubingæ (quod ille in ealendarij noui, atczeiusdem Ephemeridium editione cum Ioannede Regio mon= teaddenda propoluit) adhucutrius ca aquino tin sedis collatione facta, minor erit eiusdem Steeflerininumerusmi. 18. Et lieper tantit temporisspatium, ueleireiter æquinoctia quælibet hunc ipfum anticipalle perspicitur. Similis quoque, uel mae ior etiam in coniunctionibus medijs, atque oppolitionibus luminarium temporis præmilli diuerlitas reperitur. Hic nanque pascalem oppositionem mediam secundo Aprilis die anni prædicti. 1 520 . horis. 8.mi. 54 . descripsit, quam Paus lusepiscopuseius den diel horis. 9. mi . 4 o. assignauit. Arque altera hic modo anno. 1 5 2 1. nihil ab Alphonfi calculo discrepans, uigesimosecundo Marcij die hos ris, 18.mi. 29. (quod & nos fecimus) deputauit, Stoefferinus authoris, 17. mi. 4 3. eiusdem dieinotauit. Quade re, quandoquidem (adhibitaetiamut supra meridis

anorum distantia) non minor in ueris, & æqualibus luminarium coniunctionis bus, necdifsimilisin planetarum moribus anticipatio reperitur, non parum quidem deeo admirandum extat. Quum maxime idem Stocherinus hisce uel similie bus Alphonfitabulisin eiuldem supputationibus cousus æque fuerit, dum propositione, 24, sub litera. 3, & alibi, hoc idemannuat, dum inquit. Supputatorias rabulas mihi ufu habitas, ab alphonfinis nusqu'am discrepantes in manus recepis mus &cætera, Quod si abeisdem dissentire ipsi modo uisum fuic, atorin annua folari quantitate, Albategni sententia, uel aliorii forteminori hanctemporis spatio quam Alphonsi tabulæ absoluentium inhærendo, certam prædictoru minus corumtemporis prayuentionem, aut secus erroris alicuius notam in pramissis aliqualiter sensibilem nouit, cur non illam alicubieditionum suarum palamostens dendo aperuerit, non parti quidem admirationis nobis et alijs quoca attulit, quod Paulus prædicius, Nicolaus Cufanus, Petrus Cameracenfis ambo Romanaece clefiae Cardinales, Campanus quoce, Augustinus Ritius, Hieronymus Castilios neus, acdemum conteraneus, & ciuis noster Fracastorius ille Medicorum, ac Phis losophorum, uel etiam uatum præclariffimus minime obticuerunt. Sed neque cas men ipfius Storflerini Ephemerides inplanetarum congressibus, arque stellarum fixarum moribus abomni erroriscrimine purgantur, Quod cernentibus fenfibis Jiter innoruit in coniunctione magna Saturni & Martis anno domini. 1 5 2 6. Que. uigelimoquinto Manin einsdem diariis annotatur. Cum tamen diebus circiter tribus coelo pal'am præcessisse, ac uulgaribus per dies plures etiam præuenisse uisa sir, Quum hi camen per uisualem lineam ab oculis corum ad stellas ipsas fallerentur, minime percipientes alium elle circuli transitum per polos zodis aci, & centrum stellae, qui stellarum longitudinem metitur, alium autem circus lum, qui per Zenith nostrum, sinc horizontispolum, acstellæ centrumpertrans fit, quice altitudinem stellæ, non longitudinalem distantiamostendit. Necme fus git aliquos etiamnon uulgariter doctos, ang astronomica artismon ignaros pras dictas Alphonfi, arc; aliorum coeleftiumoruum tabulas omnes damnare, quod scilicet ex aceruatione minutiorum aliquot in mediis planetarum, ac coelestium orbium motibus omissorum per multum temporis spatium erroris congeriem clanculum adducant. quod iudiciarie rantum imbuto, ac mathematicæ artis immunifacile credo perfuaderi poterit, non tamen arithmeticam uel mediocriter eti am calenti. Qui datiseti am octavistriginta motus alicuius in anno pratermiffis. hisosper. 6000 productis, sexta quinquaginta tantu in annis totidem ex cogerie iplaeduxerit. Dicendumestigitur qu'od omni îi fere mathematicor îi assensu. Ala phonfusiple maxima præ cæterisplanetarii motibusueritatem adiunxerit (licet abaliquibus in stellarumfixarum & augium annotatione arguarur) & jam annis pluribus clapfiseclypfes luminarium, & reliquorum planetarumueri motus com prehenduntur, Etfiquiserror aliquando in Saturni, & Martismotu (utprædixie

mus) reperiatur, qui uel per suos incognitos orbes, uel per octaux spheræ motuma adhue nobis ignotum, regulari nonpossit, per quamplanetaru orbes aliqualiter agitari censentur, eadem ratione, qua medicina, & reliqua arcesper iensibiles etis am, uel minimoserrores non repelluntur, & eademmet ipfæ aftrologicæ tabulæ minime abdicari debent. Etsinance medicus (ut Abiosus inquit) alterationem complexionisabuno menfead aliumnon cognoscit, ipfam tamen per discrepantiam qualitatum in annis decemuel pluribus compræhendit, ur'a fanguinea ad cholericam complexionem migraffe. Nec minus fi superiorum planetarum mos tusex octavi orbis motuagitari & concitari pollunt, & propterea tabularis ratio in aliquo deficiat, nouam tamen per observationem mediantibus geometricis in strumentiscorrigi, & emendari possunt. Quod Prolomaus maxime in composise tione magna Almageftiobseruandumpræcepit, ad hoc ut Astrologorum error faltem fensibilis minime apparear. Quod quoniam per prædecessores nostros. & Alphonfumdenics in Sole & Luna, ac inferioribusetiam obcrebras ipforum reuolutiones longe magis observatum uidemus, ideo nullus in his, uel sensibilis faltemerror innotuit, Illosergo maiores, & antiquiores nobis prorfusi mitandos: duximus, quod Ioannes ille Monteregienlis, Paulus episcopus Forosemproniens sis, Ioannes Stoeflerus (exclusa prædictorum minutor u temporis anticipatione) Ioannes Blanchinus, & plures alinæuo nostro mathematici insignes æque effeces re.donecinquam & quouseriunioru observationes, non semel, sed pluries, necin planetarum motibus tantum, arce annua solis reuersione qu'am etiam in octaui orbis circulatione, peraliquot temporis spatium comprobentur, quum singuli, inferiorum orbium motus à superiori etiam aliquatenus æque dependeant, pros pterea no potest duo bus pedibus claudus, si uno tantum sanetur, rectus incedere, Quare tritam modo semitam prosequendo, planetarum, acstellarum loca cons sulconoluitemere immutare (quum non measit, qui mathematicorum omnium peripiema, uelminimus equidem mihi uideor) nili quancum per antiqua Gracco rum arch latinorum exemplaria syderum loca aliqua emendauimus, nec minus. ecclo eque decurrentia trutinaulmus, que pluribus in locis scriptorii incuria lone ge depranatareperiuntur. Quemadmodu postremum fusionis stellam Anno do mini labente. 1 5 3 5. die. 2 2. Iulij cum louem uidimus summo cocli cardine collos caram, eodem pariter momento cocli mediu pertransire. Quarum modo ambarii stellarum latitudine perspecta, adhibita querius q differentia norma ob remotis onem'anonagelimo gradueclyptice & medificeli transitii, easdem cumseptima piscium parteminus tertia gradusumius, uel circitermeridianum circulum propriis oculis pertransire perspexi. Quo cumgradu stella eadem fusionis aqua coes lumiplum ex cabulis noftris mediare concernitur, uigelimum leptimum pilcium gradum præsenti tempore decurrens, quum tamen stella ipsa iuxta deprauas eameabularum plurium, are eriam Ioannis Monteregienfis, liue Stoefferini ephoe meridium impressionemper septem gradus longe'a ueritate labetur, uigesis mam cantum piscium partem occupans. Prædictam stellæ annotationem ex altitudine iplius pluries in meridiano conflitutæ, maxime anno praes dicto ex mediatione coeli, & luna & stella ipsiusultimo Nouembrisdie ues riffimam prorfusagnouimus. Verum his omiffis, arce alis, quæ circa planetarum motus, & octauic xli orbis dicipotuillent, tanquam longiori, ac poriori, quam nostri, acc; astrologorum plurium, nec uulgarium quidem examine indigentibus: quibus inpræsentiarum curam hanc merito delegamus.Prætermillisetiam his quæluper Ephemeridium commentaria addus cipoterant, alias per Ioannem Monteregienfem, ac Stoefferinum luculens cissime pertractata, rejectisce prius quorundam descipientium erroribus. præmissisce his, que lsagogice doctrine omnino necessaria uisa fuerine. Ad electionum canonum normam, inprimis aphorismos quos dam sapis entumfummatim colligendo, transire uisum fuit, atqualiqua, antequamad Ephemeridium exhibitionem, ortusch, & occasus syderum perueniamus, non minus astronomiæ professoribus utilia, quamscitu iucunda (diuino opitulante numine) in lucem ex ordine expromere fratuimus,

Quomodo homini futura prænoscere, atquaticinari liceat

contra uulgarem quorundam fententiam. Biectis execrabilibus artis magica uanitatibus, diabolica inquare non diuina, ac naturalis, rejectisce alis superstitionibus, att illoru, dictis, qui ex aftris omnia futura necessitate fatali euenire senseruit, quick ter minos astronomicæ potestaris respectu liberi arbitrii superbe excellorunt, opinioni quoce corum refragabimur, qui futura aliqua quauis humana scientia prædici posse abnegantes (ut astronomia, & chiromantia, physionomia, & geomantia, quam fors, & cafualis figuratio, leuitas crinanem, & suspectam reddit) dum hoc solummodo divina mentireservatumastrutt. iplius bonitati, ac liberalitati derogant. Si nance Deus immensa suiiplius munificentia coelestibus corporibus, ac elementaribus virtutibus nouas res quotidie, ut mineralia, uegetabilia, nouace animalia, & homine (quum Sol & homo generent hominem) alterum quoch producere, ac generare cons cellit, uolucres quocecœli, & animalia quædam naturali inftinctu aeris pere turbationem, & temperiem, futuramica cantuserenitatem, uel motu aliquo corporisprænunciare donauit: Quis illum homini fuam ipfius imaginem gerenti, cuice diuinum quid afflatu fuo inspiravit, & quod maius est, cui hominem alterum'a peccatis absoluere, & emundare concessit quod diuis nætantum copetit potestati) futura modo aliqua prænoscere, magisqu'am uolatilia, & quadrupedia, & altius elargitum fuisse negabite Præ cæteris ergoNoam, exinde parresalios (fi-lofepho, & Berolo Chaldæocredimus) alijs non minus divinis, & coeleftibus disciplinis edoctum Astrologiam coe

PROCEMIVM

litus, (quod facile credi potest) edocuit, quaille Armenios, & Scytas pas rumpost universale diluuium instruxit, ut quid ab anni initio, & cardinis buseius per annum reliquum futurii effet decernerent, ob quam remillum diulnæmentis participemesse dixerunt. Sic pater ille multarum gentium Chaldres, & Aegyptios rque doctos fecit. Nec minus & nos, per hanc (quamtheologiam naturalem Petrus Cardinalis Cameracenfis in libro Concordantiæ Astrologiæ cum Theologia, merito nuncupauit) dum sye derum cursus emensi, acceedocti fuerimus, agnico coli firu, acftellaru dispo litione per interrogationis afcendens, fine per horam exitus infantisex utes somaterno, perce coniuctiones, & aspectus planetarum, attreclipses lumis narium futura contingentia in hoc fa culo, nontamen necessitate absoluta. fed condicionara prævidere poterimus. Eft nancecolum (quod Theologi quoque noninficiantur, ut Thomas de Vio Caietanus super pfal. 104) uehi culumdiuinæ uirtutis, quo mediante motu, & lumine denfitatum, ac ftellas rumiplius, canquam fecundiscaulis, Deus cuncta hac inferiora, & elemens taria corpora ordinat, acce disponit. Exquo unitus huius seculi subiecti funclationibus superioribus, ucomnis huinfce mundi uircus inde gubernes tur.ut Philosophus, & Astrologus aque attestantur, Vndeagnita coli difpolitione, futura mundicontingentia facile admodumerit pracognofere. Cum nance Deus coclumficut pellemextenderet, formans univerficatislis brum. Futura quocaccidentia, que uim nature minime excedunt, ineos dem mirifice descripsit. Vnde coeli enarrat gloriam Dei, & opera manuum eius annunciat firmamentum. Et Deus fecie luminaria magna, ut ultratemporum diuisionem, essent nobis in signa uidelicer futuræ pestilentiæ, belli, penuriæ, pacis, & abundantiæ, accæterorum naturalium euentumm nec eiscausaliratem attribuit Moseslegislator, ne ludæisimplices a veri Deicul tu deviarent, quod expositorum aliqui minime tacuerunt, ut Alphonsus Episcopus Abulensis, (nece enim hoc designis coelestibus intelligi poruie, quum non luminaria, sed stellæ coclo affixæ signa eiusdem efficiant.) No= luit quoq & filius dei unigenitus tanqua uerus homo libri æternitatis eiule de liceris deelle, ucea qua hominis funt, uelut naciuitas, mortis aculeus, & alia plurima per figură cœli fignificarentur, quæ tamenuim humanæ natus ræminime excedunt no ea quæ foli potestati diuinæmere ac libere subsunt. Nonquiod figuracceli caufaeffee quod Christus nasceretur, sicutinece oracula prophetarii caufa fuere, quod lefus pateretur, Sed potius ut inquit Al bertusin fpeculo) fignificatio fuerae, Immo & uero ueriusipfeerat caufa quare modusadmiradæ fuæ natiuitarisper cœlumfignificarecur. Verum nos ne contra carholicorum dicta, ac dininam legem, contractueram acnas suralem Astronomiam in pronosticandis futuris in hoc seculo contingat sepius aberrare, tria posceoportet suturorum euentuum genera, Quorum aliquafunt primum, que habent caufam determinatam, & infallibilem, ut

motus coeli, ortus, & occasus signorum, coniunctiones planetarum & lue minarium, ecliples, & similia, in quibus est determinatio, & infallibilitas ex parte motoris, ac etiamomnisimpedimenti remotio ex parte qualibet, nisi in quantum subiacent divinæ uoluntati, quæ tamen semper ordinate agir. Er de hisuera, accerta estastrologica scientia, acq ipsorum expertapræcos gnitio. Quibus præcognitis, & corueffectus facile innotefcent, ut fint generaliamudi huiusce accidentia, bella, fames, pestilentia, pax, abundantia, regnorus sectarumicamutationes, grandines, aerisicamaxime pturbationes. elementorii comotiones terræmotus, & similia, quæ ex coeleti influxu, at ; elementorii commotione, quæ ui syderii aguntur, quotidie, uelde æuo in zuu euenire concernimus. Que quonia ab uniformi coli motu inuariabilis ter æque dependent, ni fecus a prima caufa fecunde miraculofe impediatur (ut pdiximus) peritiffimus in his aftronomus no longe a ucritate aberrabit. Verumquæporest Deus potestate absoluta, nunquam, uel raro fient, quia Sequererur, quod Deusfaciar aliquid, & minus ordinate agar. Qui ramen omnia qua funt'a Deo, ordinata fint, secundum apostolum. Neque in his bonendum estemiraculum absquecessitate, uel nisi in re magna, ut inmorte Christi solaris descetto, & losue necessitatis tempore Solis non naturalis retrogradario. Secundo aliqua funt futura coringentia, quæ caufam habent indeterminată, & fallibilem, sicut sunt operationes hominum pure, mere, & simpliciter uoluntaria, atquideonon habent determinatam ueritatem, necedeterminaram falfitate, ur philosophus inquit. Namuohiras hominis indeterminata est, & ad utruck uertibilis, uidelicet ad opposita, atchideofals libilis, quiaetiam uolenti aliquid perficere, multa occurrere possunt impedimenta. Et propterea quii sit anima ipsa hominis nobilior colo, nec possit illud, quod corporaleeft in anima agere, qua spiritualisest, Ideo non porest colum uoluntatem humanam immutare, necein cam, nifi indirecte inclis nando agere. Et ideo talianon possunt astronomica, uel quacunce alia hus manascientia, sed quodammodo exili coniectura præsciri. Tercio aliqua funt quæ babent caufam determinata, fed aliqualiter fallibilem, ut ea quæ partima uoluntate hominis, partima coeli influxu dependent. Et hoc quia eumhomo naturam habeat bipartitam, unam. f.coeleftem & atheream. uis delicer animamintellectualem, alteramuero ex elementorii compagine pro pagatam, quod est corpuscaducum, & mortale, ea propter eandem oportuit duobusagi principi's, coli f. influxu, & uolitate, & ficeffectus, & opes rationeseinsde uarie & miltæ inuenintur. De hisigitur cum magiscadem corpori, qu'am animæ appropriatur, minus que uoluntati subsunt hominis. ut bona fortunæ corporis, & animæ habitudo, ac ueluti fenfus, & intelles Aus , fanitas uel infirmitas, longus uel breuis vitx terminus, & ut plur imil biothanata mors, quæ uix humana uoliitate, & sapientia regi, ucl moderari possunt . De his dico aftron. mus ueru, acrectum profert iudiciu, no tamen

utde prioribus ira penitus infallibile, ueruntamen sufficienti, ac probabili conjectura fundarum. Cumenim coclumad hoc, uel ad illud humanum cor pusalteret, arce disponat, bonamue fortunam, uel malam homini inspiret: non poterit propria uoluntate corpus proprium de infano fanum facere (de his loquor, quæ a natura funt) necpoterit fimiliter bona fibi fortunam in negociis humanis, acdignitatibus, & honoribus appropriare, & fic de memoria, intellectu, longa ipfiusuita, & decereris. Nec inficior tamen hos minem penitus humana sapientia, acprouidentia posse stellarii opus adius uare, uel incuria, & malo regimine abbreuiare, Sed hoc raro & per accidens euenit. Quæ uero humanæuoluntatifubiici, & abeademmoderariuel cor= ripipollunt, licet fint copori acceli influxu naturaliter infice, & propagas tæ, ut concupiscentia, & irascibilis, ex quo aliquiad desideria uoluptatumaliqui ad iram, & uindictam, aliqui ad bonos mores, philosophiam, uirrue tes, & remperantiam, adfraudes, aliqui bella, & rapinas magis proni existunt. De his potest naturale judicium proferri, ad quod cœlum naturalis ter inclinat, att disponit, & sic naturali, att humana coniectura fundatum. Ouumautem homo sit animal politicu, ipsumer Deus intellectuali spiritu infignuerit, atteundem coelefti radio uultusfui, & rationis lumine illustras uerit, animamic eidem liberam, ac uoluntatem cumpotestate arbitrii sui sue per humanas affectiones, acfyderum inclinationem donauerit, his mediane tibus (præuenienze divino lumine) humani corporis affectiones. & passios nes in divinam; acfupernaturalem alteram naturam transferre, & commus tarepoterit. Vnde in his Astronomorum, accæteraru humanaru scientias rum judicium fallax, & inane, Quod de brutalibus hominibus, qui non ducturationis, quin voluptatis affectu humanam naturam in irrationalem commutant, ut plur imumuerax fiet. Quicquid igitur in libro hoc uel quos rumcunqualtrologorumiudiciorudictiscirca futura contingentia dictum, uel scriptum inueneris, non aliter, qu'am hic modo prædiximus, dictum puta. Quoniamnostra hæcest sententia elementaria corporaquæque, siue ex eildem compacta a superioribus gubernari : cuncta tamen diuinæ pos testati, atca hominum actus, qui ab hac moderari possunt humanæ subiici woluntari.

Orientalitas'a Sole.

Signa & quarta masculina.

Particularia Lunæ impedimenta. Duodenaria Lunæ cuminfortunis, uel eis

dem contraria.

Quando est in ultimis gradibus signorti
uidelicet terminis malorum.

Quando non aspicit domum sua maximein II absq: receptione Mercurii.

Existentia ipsius in signis & gradibus mae

De effe circuli accidentali, ae domibus coeli duodecim.

Orumhoc nostrumsupernum, acq inferius positum hemispærium inpartes duodecim (licet diverlimo de) æquales ramen secundu quid dividi decernitur, quas domos, ædes, ac domicilia appellant. Communior tamen & rationabilior affertio quatuor coli quartas horizonte, ac meridiano interceptas in partes ternas iuxta quatuor alios circulos per punctafectionumamborum prædictorum circulorum ductos, & fic coe lum torum in duodecim partes aquales in equatore secat, in aqualia zo= diaci intersticia iuxta politionem circulorum sex distinguentium (coas-Sumptishorizonte, ac meridiano) efficiens. Initifiuero divisionis istius inoriente ab horizonte inferlus statuunt quem horoscopum, uel ascene dens uocant, eo quod de inferiori ad superius hemispærium sese tollit. Huncetiam, cuspidem, cardinem, aut angulum orientis communiter appellant cui secunda succedit, dehinc tertia domus subsequitur. Sico post angulum quemlibet quartæ domus. f. septimæ, acmedij cœli cuspidem, fingula fuccedens, ac reliqua quatuor cadentes domus fuccedentes ipfas. Subsequentur, quæ duo decimin totum numeratim efficientur.

Quarta igitur para, quæ est ab ascendente gradu superius uidelicet. 12.11.
ac, 10. domus orientalis dicitur, masculina puerilis, ucrnalis quoque, &

fanguinea.

Quarta uero que est a gradu decime use ad gradum occidentis . videlicet nona, octava, & septima, meridiana, seminina, æstiva, invenilis, & cholerica.

Quarta alia que estab occidente userad gradum quarte domus, uidelicet, sexta quinta, & quarta, occidentalis habetur masculina, autumnalis, me-

lancholica, & fenilis.

Quarta denique qua est a quarta domo ad ascendens: uidelicet tertia, secui da & prima septentrionalis, seeminina, hyemalis, phlegmatica & decres pita.

Ascendens medietas eadem est, que à gradu decime use ad imumiterre continetur.

Descendens, quæ a graduipso mediscoli per septimā userad gradum præs dictum mediæ noctis habetur.

Dextera cceliuocatur, quæest supra terramuidelicet. 12, 11.10.9.8.8.7. domus.

Sinistra coeli qua est sub terra, vide il ce, prima 2, 3, 4, 5, & 6. domus.

Dextera ascendetis: est para coeli, qua est ab ascendente ad septima sub terra.

Sinistra ascendentis, qua est ab ascendente ad septima m supra terram.

Dextera orientis est pars media hemispærij ab oriente ad occasum per ses prencrionem.

Sinistra orientis pars est alteratitidem supra terram per meridiem ab ascens dente usque ad angulum occidentis.

ISAGOGICA

Septem funt loca, meliora, fortiora, & laudabiliora, inquibus planete fune fortiores, Exceptis propriis fignificatis domus culus libet, ut decima pro dignitate, & sic de ceteris, Nam domustuncrem ipsam significans ome nibus alis præfertur, veluci etiam dominus eius,

> Octava & Duodecima

mala Kinfortunata

Primaigituruniverfaliter fortiorest decima. Sexta

Decimafortior eft feptima. Septima fortiorest quarta,

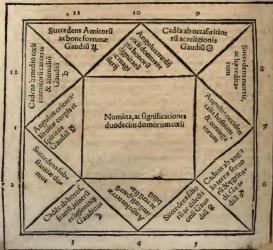

Quarta fortior est undecima. Vndecima fortiorest quinta.

Quinta fortior nona.

Tertiapræualet secundæ.

Nonafortior tertia. Post ista septem fortior, seu minus debilis est domus tertia.

Secunda demu præualet octavæ. In hac .n. dicitur elle magnu infortuniti.

De accidentibus planetarum, tum inter fe, tum in femetipfis.

Rohibicio in primiseft, qua afpedus prohibet planetarum, & considentibus positiones, uel radios iplorum impedit. Et hoc dupliciter corpore. fluel afpedu. Corpus enim planetae afpedum alterius impedit, dum propius planetae, qua millequi afpicit fueris, ueleciam dum pares aquae fuerint gradustam planetae afpicientis tertifum, qu'am corpore applicantis. Alis ter planetae radii, dum propius tertifo fuerint tam corporalem coniunctionem, qu'am afpedum longinquioris impedit.

Receptio planetarum est, quando planeta iungitur domino domus, in qua est, uel exaltationis, aut aliarum minorum dignitatii estitatiium. Etip fesimiliter dominiii aliquod habeatin prædicolocoin quo est. Verum quando unus est in dignitatibus alterius, & econuerso, melior est & pers

fectior receptio, quam effe pollit, maxime extrino, & fextili.

Redditus uirtutis dicitur, quando planeta ex domo propria, uel dignitate alla alteri lungitur planeta combusto, aut sub radis, Solisuel retrogras do existenti. Hienand propter debilitatem suamalteri respicienti uirtutem reddit dominoi plitus, quam retinere non potuit. Es si ambo suerita inangulis, uel succedentibus, redditussis se prosituserte. Similitare estam si planeta alteri applicansin angulo suerit, utilis erit, licet alterin cadent sit, dum ramen alteri recipiat. I tem dum ille qui reddituir tuttem alteri in angulo suerit, alteri utilis erit, montanen econo uerso, nissi cum receptione (utip rediximus) sias, Verum si ambo cadentes suerin, cum derrimento redditus erit.

Translatioluminis, uelnaturæ primo fit, quando feparatur planeta leuis curfu a ponderofo, dehine alterifungatur, unteprimus transfer e natura fecundi ad tertium, Itemfi leuis ponderofiorife, iungatur, & hicalij ads hue ponderofiorife, tune medius hoe modo naturam primi ad tertium

transfert.

Reddirus luminis, fiquando planetæduo inter fe difitantes tertio alícui ame boiung atur: tuncetrius file amborum lumen colligit & proficita deos dem, uel eriam ad loca quælibet fignorti zediaci fextilis. f. triniutel quadratí, & diametralis radiationis, quibus in locis planeta alius exiftes duo rumprædikor filumen recipit, & tunc i dem fer efiquod translatio.

Pulfario eft, quando aliquisplaneta per aspectum iungatur domino signi, exalcationis, triplicicaris, termini, uel faciei signi illusi n quostuerit. Va sileuis econuer soi na liqua dictarum dignitatum suarum suerit. Reparenta per sileuis econuer soi na liqua dictarum dignitatum suorum suerit. Reparenta naturam mitticad dominum suipsi suspini. Hieseundo modo propriam leuisnaturam ponderossori, Reperegrino mittic.

Refrenatio est quando planera alteriapplicans corpore, uel aspectu, antes quam cidem conjungatur, fit retrogradus. In tali cafu refrenatur, ne tas

lisconiunatio uel afreduscompleatur.

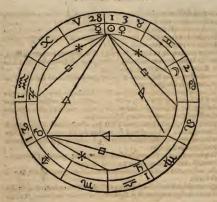

Contrarietas fit quando planeta pondere sus in medio est duorum leuium. Et quando prior deberet ipfi medio coiungi, cui applicat, econuerfo tertius leuis, qui ab eodemelongabatur, per retrogradationem medio copu latur, & transiensillum, alteri etiampriori coniungitur. Etsiedupliciter priorisconiunctio cum medio non tanti impeditur, sed etiam cum huic secundo congredi debuerit, tertio contrario modo copulatur,

Abscisio luminis eodem fer'e modointeruenit, quum tertius, s. priorem. & secundumper gradus aliquot in aliud signum transiensper retrogradationem medio huic, non priori camen conjungitur. Alio modo etiam fi fuerit planeta leuispetens coniunctionem ponderoli, Ethic ponderoli orisaspectum, uel congressumineat, antequam, s. prior ipsi coniungatur, tunc tertius lumen prioris'a secundo abscindit, cuiusmodi congressum expectabat.

Frustracio itidem fere secundo hoc modo; quo abscisso luminis sit quum. S. prior'a fecundi congressu frustratur, dum fecundus hic fignum in quo fuerar exiens, & fignumaliud iniens, planetærertijradijs copulatur, prio

riscongressum postergans,

In exemplarithemate Soltrinum Martis ad Venerem in codem graducore poraliterimpedit. Verum *) infecundo & gradu existentis coniune Aionemcorporalem O & Q prohibet. Recipiunt sesemutuo Q & D .ae Venuscombuftauirtutem Lunæ reddit. Transfert Mercurius lumen @ ad Q, pofiquameidem conjunctus, Venerem corporaliter perit, uelalio modo, dum @ a Mercurio recedens Veneri-copulatur, runc Sol Mercuri lumenad Q transferet, necminus lumen Solis Marsad Saturnum Secundo hocmodo transfert, Vel Martis lumen & Iouis Sol ipsecolligit. & ad locaeademmet ipforum reddit, & transfert. Contrarietas & lumie nisabscisio in Q O & & cernitur, siquando Venus retrograda uni, uel ambobusetiam jungatur,

De his que accidunt planetis cum Sole & Luna,

& primo de combustione.

X his quæ speckant planetis quinche ergaluminaria prima est contume tito, de qua supra. Hinc est combustio, cuius quidem terminusin planeta quolibet per semidiametrum Solts, uidelicet gradus septemenum dismidio. & semidiametrum orbis radiorum planetæ cuiusuis aggregatum accipitur. Er sici in Luna graduserunt tredecimeum dimidio. In Venere & Mercurrio gradusundecim. In Marte gradus undecim um dimidio. In Venere & Saturno gradus duodecim. Sici nanche dum Soli approprisquant per gradustotidem ante uel retro proprie comburi dicuntur. A listamen dantur combustitonis termini, quibus promissa adimplet planeta quilibet, uel non, in annis maxime uite anti, quum surri a khocoden. Trea nanque superiores dum occidentales suerint per gradus. 15. a Sole, ac poste a dum Sol ab el se longatus suerit per gradus decem combusti prors sus desine visça ad quindecim sub radios elle dicuntur. Venus, & Mercus

rius dum Soli per gradus feptem appropinquant, donce per gradus que transcant, combufit funt, infra, 12, fub radijs. Luna per gradus, 12, ante St. tero, uel faltem per gradus, 10, poftea comburitur, abinde fupra fub radijs Solis ufiça ad. 15, permanet, Echæc cum Venere magis, qua ma planteza alija Sole comburitur.

Aimugea planetæ est, ut sit occidentalis 'a Sole, & inter eos totsintsigna, quot suntinter domum Solis, & planetæ ipsius, uel sit occidentalis 'a Lus

na, & fint intereos tot figna, quot fupra.

Orientales dextri tres superiores dicuntur quum noctu ante Solemoriune

tur econtra in die occidunt.

Occidentalis sinistri econuerso quum die post Solemoriuntur, noctu occident. Et a consunctione per gradus, 30. usca d. 60. fortificantur in origentalitate sua. Et a retrogradatione per gradus totidem postea occidentales fortes siunt, postea utrincs debitiantur.

Inferiores duo quando feparantur à Sole per directionem, & uespere post Solem occidunt, & Luna similiter, occidentales dicuntur. Venus & Mer curius retrogradi post conjunctionem, at Luna post oppositionem cum

Sole orientalis dici folet.

De his quæ accidunt in semetipsis est uacuitas cursus, quando.s. separatur ab uno, & nulli iungitur, donce suericin illo signo.

Feralis, uel agreftis dicitur, quando planeta nullus fignum aspicit, in quo

ipfefuerit. Peregrinusubinullamhabet dignitatem. In fuo haym, ut mafculinus & dis urnusin diefupra terram, & in figno & graduetiam mafculino, & econs

tra.

Afcendensin circulo fu æ augis, uidelicetin fuperiori parte, dum per grædus, 90, ipfius augi applicat (quemadmodū in Ephemeri cuius libet propriæ uniufcuiufgauges deferibuntur) & ab auge itidem per gradus to sidem defendens, minorie lumine, & magnitudine, & curiu dicitur, Ab oppolitouero augis per gradus to dem dumafcendit, ac defendit, maior erit lumine, & magnitudine. Et quando mouetur plus medio curs fu, uel minus, dicitur auctus uel diminurus curfu.

Et quando transit nodum interfectionis deferentis cum edyptica, qui gene hazar dicitur, seprentrionalis, uel meridionalis ascendens uel descendens fit, quemadmodis in Ephemeri notatur. Quod in Luna per te hot pacto.

per propriam tabulam, & canonem agnosces,

Sexta eti coniunctio luminariti in mentruis luna ribuscoiunctionibus, Eticias quio quado dicitur a fennena contractioniunctio attactioni contractioni contrac

DE REVOLVTIONIBVS.

nds, in reuolutionibus annorum miidi, fignum ipfum fignificatur, quod ho ra introitus Solis in primti Artetis punctum aftendir. Quorum omnium fis onificata. & apotelelmata in libris judiciorum exquire.

Deinquirendo Hylechsignificatore ulta,

& Alcocoden annorum domino. C Inatiuitas fuerit in die, considera primum locum Solis, qui si fuerit in afcendente, uel per quínca gradus ante, uel in decima, aue in undecima. & aspexerit ipsumaliquis habensibi aliquam dignitatem'a domino do mus ad dominu faciei ultimo, etia fi fuerit fignum ipfum foemininum, ipfe erit hylech, uel simodo fuerit in septima, octava, uel nona prædictis modis infigno tamen masculino. Aliter Sole hylech non sic extante cum condicionibus iplis, Lunam secundo considerabis, Qua si fuerir in angulo uel succedenti, uelin tertia etiam, & in signo, & quarta formininis, uel saltem infigno eiufdem fexus, cum afpectu femper, ut prædiximus, ipfa erit hve lech. Quæ si non fuerit, & nativitas fuerit coniunctionalis, tuctertio quas ras hylech abascendente quarto aparte fortuna, ultimo a loco conjunction nis. Sed si nativitas suerit pravientionalis, & luminaria non suerint apta hylech, runc'a parte fortunæ ad afcendens, ultimo ad gradum præventios nis lingulariter procede, in histribus de fexu non curando, fed tantummo do quod in angulo, uel succedenti cuma spectu (ut prædiximus) reperiancur. Alchabitiustamen post loca luminarium utrolibet a gradu coniunction nis, aut præventionis primu, deinde ad partem fortunæ, ultimo ad afcens dentis gradum processit. In nocturna genitura a Luna, primo inchoans dum extabit, secundo'a Sole dehine successive secundum prædictum modum. A feectus ab codem gradu uschad medium orbis acceptatur, qui in parte fortunæ nisi tantum'a domino domus, uel exaltationis consideratur fecundum Haly, in alijs genraliter ut fupra, Abica aspectution potest effe hylech, nece alcocoden, niss cum luminaria in prædictis locis fuerint apea hylech indomibus, uel exaltationibus fuis. nam hoc modo cum fuerint hys lech, uel alter corum, etiam alcocodenables alio aspectu. Iteminalio casuquemponit Haly, uidelicer cum dominus lociluminaris temporis in gradu fuerit, qui diem æqualem, uel pares habeat ascensiones cum loco ipso lumis naris. Veruntamen planeta combustus infraterminos, quos præmisimus. nonpotest esse hylech, nech alcocoden, qui est datorum annorum nari, qui ce plures habet dignitates in loco hylech, ipfumice meliori loco coeli, tel effe ad Solem aspiciat tumplures uel pares cualio fortitudines habuerit. Et ins cerpretaturuir, & hylechuxor, Dator nato Alcocoden annos fuos maiores uel minores & medios, juxta fitum fortitudinem, & dispositionemipsius. Qua de re plures astronomorum sententias rimare, Solutionem autem pes nes Antonium de Montulmo, & Ioannem Monteregium. Tractorus

Nter cateras Aftronomia partes, que inprognoficandisfuturis uería-Lour, difficilisac difficillima, pene habetur certa futuræ aereæ qualitatis præcognitio, cum non abuno tantum dependeat principio, quemamodum nativitatis, revolutionis, aut interroganonis iudicium, uerum'apluribus, ut ab ascendente conjunctionis, uel præuentionis in revolutionibus annorum,quartarum anni,congressium luminarium,tetragonum, atchopposis tionum, & ingressium signorum, & propterea varios, atchdiversos sortias tur effectus, quos etiam abortu, & occasu ftellaru, necminus, qu'amex pras dictisstudiosa nouir antiquitas. Addequod caloris nimia, frigorisue acceso fio aut nubes prohibet, aut dividit, aut cito dissoluit. Ex quo in eadem regio ne æftate hic pluit, illic ferenitas. Ato frigidiffimistemporibus, ut calidiffis misetiam, parum, uel raro pluit. Ad quod etiam accedit uaria regionum dispositio, acsitus, ut septentrionalis, meridiana, conuallis, campestris, ac montuofa. Vnde calidifirmos, acfrigidifirmos, ficcos, uel humidos ventorii afflatus. hicniues, & glacies, illic aftus intenfos fub codem hemifpærio,. nec diverso feretempore, vel loci interstitio adelle concernimus. Cum igiturprædictorum effectuum bipartitæ,ueletiam tripartitæ fint caufæ, quas nouit universorum philosophantium schola, in hisoportet iudicium proferentimultas adhibere confiderationes.

Nonenim constellatio eadem, sub qua plures natisfunt, omnes reges facit, uel omnes alpos, cum alicubi, ut in Actiopia, omnes nigri fint, que omnia mon tantum fecundum uirturem, & qualitatem agentis, sed etiam seundum dispositionem suppositiones lligenda sunt. Sicerunt igitur & Astrologorum dicka, & cestorum apotes lumata in elementaris corporis dispositionen ponderanda. Que quoniam aeris dispositio ex ui cesti ac syderum inse fluxu primo, aeprincipaliter conssistit, are relique prædictorum accidentium cause tanquam secundarise supponuntur. Hæe propetera ex multorum Astrologorum dissis breuiter exponentur, quorum, nec præmissorum missassualitates perspecta, ono longe multum aucriate aberrabis.

Quæex hali dictis, Omar, & Albumafaris fententia colliguntur.

A Ceidentia & qualitates aeris in anno dignofcuntur ab afcendente coniunctionis, uel prætentionis Solis, & Lunz, que fuerit ante inveroitum Solisin Arietem, & locis fimilis eer planetarum. Vnde fi Saturnum intueneris in aliquo angulorum ab afendente, uel etiam la domino lpfius, firmum in eodem loco, ac fortem; maxismein mediocetii, & aliqua dignitatum fuarum, in tempore caloris, minuit calorem, & Intempore frigoris facit magnum frigus. Etil remotus fuerit ab

E

angulis, non multum diversificabit annum in qualitate sua, nisi forte dum uenerit ad angulosascendentis. Et quando inanni mitio fuerit in angulo'a domino ascendentis, videlicet in .4.7. &. 10. abeodem minor & debilior erit significatiosua, qu'am dum fuerit in angulisab ascendente signo. Nec minus de Marte iudicabis secundum qualitatem suam, quem modo prædie cto in angulisexistentem, uelfuccedentibus, remissius tamen, in significatos rem elegeris, & fic deplanetis alis. Quorum etiam commissionem, & aspe-Auum reciprocationem, & infignispermanentiam considera, Aspicesimi= liter Mercurium, qui si fuerit in medio coli insigno aereo, significat diuere fitatem magnam in aere, tonitrua magna, & crebra fulgura, maxime fi alis qua infortunarum fuerit in angulo aliquo abiplo Mercurio, Etadiuua te in hoc'aparte aeris, & uentorum, faciendo hancparticipem cumfignificatore ipfo, Qu'od si fuerit cui parte eadem repertus, ueleius dem domino, iudica ex co. licut ante diximus per existentiam iplius in angulo, & aspedusalios pla netarii . Pars hac accipitur a loco Mercurijulca ad gradum domini domus in qua est, addendo desuper gradus ascendentis, & proficitur de incepsab ascendentissigno. & ubi finitus fuerit numerus, ibi eft pars prædicta, quod fi Mercurius fueritin domo fua, accipe fuo fmet gradus ufcad afcendens, & projice ab afcendence. Et nunc uide quomodo fuerit pars illa cum planes tis, & secundum hociudica. Et illud quod diximus de introitu Solis in Ari etem, hocidem facies deingressu ipsius in quamlibet quartarum Zodiaci. Similiter de ingressu Solis, & Lunz inquodlibet signorum duodecim. Tamen fundamentum & radix omnium prædictorum eft abascendente cons iunctionis, uel oppositionis quartarum anni, & adomino tunc ascendens tis; & domino locorum ipforum, quoniam quando isti fuerint in locis hue midis & pluuiofis, fignificant pluuias, maxime fi applicuerint planetis hus midis, & pluniosis, & siecontra, contrarium iudica.

Ericias quod quando planeta fignificator fuerit occidentalis, retrograsdus uel parui motus, aut descendens in latitudine, uel incirculo sua augis, fignificat pluuias, & ecotra. Item fi fuerit combustus pluuias designat, prass

ter Martem, qui folus combustus pluuias minuit.

Scituretiam dispositio aerea in pluusistonitruis, & coruscationibus ab introitu Solisin. 20. gradum M. Namsi tunc Juppiter, Venus, & Mercuritrus Sulerint occidentales, autretrogradi, judicanno illo pluuias multas. Postmodum considerastiellam Saturni, & Martis, quorum alter fortior sit, & quamfocietatem cumplanetis, & Mercurio præsertim habuerit

DIEI 4

Horam noftis quamlibet per quadrantem, & tabulas ad hoc factas exalts

Abita altitudine stellæ & ortu ipsius sine exfixis, fine ex erraticis, quam noueris dum tamen maxima Solis declinationem, hoc eft gradus. 22. cum dimidio minimetranscendat, cum declinatione eius dem, si septene trionalisfuerit, superiorem sequentis. s. tabulæ partem ingredere, quæ altie tudinem fellæ utramer ab ortu ad occasum, & arcum semidiurnum, iuxta declinationem iplamper horas æquales continet. Sinuero meridiana stellæ eiuldem declinatio fuerit, inferiorem tabulæ eiuldem partem'a gradibus,o. ufchad gradus. 23. mi. 30. exquirito. Sinancestella eadem nondum meris dianum adierit, priorem tabulæ partem ab ortu citra horasmeridiei ineas, alias uero subsequentem tabulæ faciem quæ ad occasum tendit, adire pro cures, Verolibet nance intraveriscum declinationeftelle, & altitudine ipe sius dextrorfum procedendo (nusqu'am inferius, aut superius declinando) altitudo hec eadem in angulo communi reperta, superius edirecto horam ab ortustellæ altitudini ipsi correspondentem oitendet. Declinationem aus temftellæ cuice debitam per tabulam noftram ftellarum fixarii anno Chris Ai. D. 1 52 9. uerificatarum, fine per tabulas Ioannis Monteregiensis pro erraticis perscrutabere. Qu'od si declinationem hanc stella neutiqu'am in tabula præcisam offenderis, ueladhuc altitudo stellæ habitaper gradus, & minuta eadem, quæ tabulæ describuntur minime apparuerit, tuncpropor tionali parteutrin recouti licebit. Habitis autem horis, & minutis ex proportionali parte hic dicta, uel etiam tantum horis integris ab ortustella ad horamipfam quamfcire defideras hincortum fellæ ipfius, uidelicet qua ho ra diel, uel noctis horizonta tuum ascenderit per doctrinam priusdictam noscere procurabis. Si nance horas prædictas ortui huic sedulus adieceris (siue nocte eadem, uel præcedenti modo die stella eadem astronomice orias tur)ex additione hac horarum, & minutorum prædictorum (abiectis hos ris. 24, ubi opus fuerit) certus horarum, acminutorum numerus ab occasis Solis emergentium profiliet, ubi .f. horam ortusftellæper horarium Italia cum inftrumentum exhibueris, quod intabula nostra negocio huic accome modata, atteinferius descripta observatur. Huiusmodi reigratia proceles riori horarum calculi exhibitione tabulam aftronomicam stellarum fixarum infigniorum exarauimus, qua. f, diei, uel noctis hora, & minuto noftra hactempestate supra nostrum hoc hemispærium ascendunt, horas, & mie nuta perfingulos denos menfium diesaboccafu Solis iuxta commune Italicum horologium assumendo, quod quilibet ex se ad singulos dies mensie umappropriare, nec non infuturum per annos aliquot ob motum augium ad fingulas prædictorum dierum horas, & minura examustim (ubi opus fuerit)reformare poterit.

DE HORIS

Ortus aftronomicus fiellarum fixarum notiorum ad denos fingulos menflum dies & horas comunis horologia ad medium fere fexti climatis.

CANON DE COELI DOMIBVS FABRI

candis, cum sublequentibus e Ioannis Stoesleri Ephemeridibus

VODECIM domos codifecundum modum commodiorem, quem rationalem dicimus, facillime confruere, digefilmus quinque tabulas particulares pro domibus coliconfituendis, adgradus camen integros, commodiffimas. Visam quidem pro latie tudine, eleuatione poli ardici, 4.3. graduum, aliam pro latitudine, 4.5. graduum, tertiam prolatitudine, 4.8. graduum, quartam pro

latitudine, 51, graduum, & quintam pro latitudine, 54, gradui, tanquamfuffe Aurastoti propemodum Europæ, & præcipue nouitils, qui astronomicæ discie plinæ fam primi indulgent. Tametli faltum fecimusper trinos gradus, ita quod pro binis gradibus mediis proprias tabulas noncondidimus: Licebit tamen uti cabula quapia, primarie quidem & condigne, pro latitudine cui ascribitur. Ratio nabiliter autem & fine uestigio erroris sensibilis pro duabus lautudinibus collateralibus quarti una proximo minor est latitudine propria tabulam habente. alia antem proximo major ea. Et sic tabula latitudini, 42, graduŭ inscripta, duas buseriam lacitudinibus, 41, &. 43, graduu, non inepte accommodabitur, Denicetabula pro . 5 4. gradibus conscripta, 5 2. &. 5 5. gradibus serviet. Haud alis ter, de tribus reliquis interceptis, intelligendu est. Nunc ad rem ipfam fauste pro-Ad meridiem dici prolibito accepti, sume ex Ephemeride motum Solis cuius fignum quære in fronte tabulæ, sub numero polari tuæ habitationi convenienti, aut viciniori, gradum vero Solis, in linea decimæ domui affignata. perquire, Quibus inuentis, edirecto gradus Solis dextrorfum, initia quinque domorum coli undecima videlicet, duodecima, prima, secunda, & tertia, ad meridiem propositidiei, dicto citius deprehendes, Ipseautem gradus Solisprin cipiű regiædomus, quam decimam appellamus, oftendet, Quodfi gradui Solis minura aliqua adhæferint, hac lege initia duodecim domiciliorum cocli, tempos remeridiano agnosces. Gradum Solis integrum, ut iam exposuimus, in tabula percontare, ad cuius sedemaccipe, extra scribendo, tempus ad sinistra. & quinch domoru undecime, duodecime, prime, secunde & terrie, initia ad dextram, Tempus sic extra scriptum confer ad tempus immedia e sequens maius, differen eiam sumendo, qua tempori iam extra scripto subnecte. Idem sacomnibus dos morti principiis, sua cuilibet differentia subscribendo. De differettaigitur teme poris extra notati & minutis Solis, accipe parte proportionalem, secundii proportione omnibus notiffima ad .60. minuta, quampartem proportionalem immittein tabellacuius tituluseft, Quatuor minutorii temporis queredo minuta inlinea minutorii ad sinistră & secunda (si qua fuerint) aut propinquiora in liesea secundor i adharenti, Differentia autedomus, puta undecima duodecima

& cærerarum domorum, quære încapite tabelle, & quadin angulo commund reperies de gradibus & minutis, aut minutis duntaxat, adde huic domui cuius acceptii differentiam: hoepaco iufitus cœll domicilia ad meridie infitiues,

Ad cempus autem quodeunc post meridianum, initia duodecim celli domie ciliorum haenorma abiolues. Cumfigno & gradu Solis, ex Almanach receptis ingredere tabuladomor ü tug habitationis, queadmod ü prelibatimus, & euicis no gradus iolaris sinistrorium repus inhoris & minutis reperti extra notato, Me mentotame si gradui solis minuta assumitati etimende: de qua & mis nutis Solis accipe partem proportionalem iuxtaintegros gradusad. 60. minuta, quam partem proportionalem iuxtaintegros gradusad. 60. minuta, quam partem proportionalem temportettra scripto aditunge, minuta minutis & secunda si. 30. excesser internationalem temportettra scripto aditunge, minuta minuta most utum post proportionalem temportettra scripto aditunge. 30 fuerint, respecta scriptorium minuta minutis & secunda scriptorium coris unam horam ad horas pracedentes augeas, adde etiam horas horis, & si ad. 24. auguste etuerint, respecta scriptorium scriptoriu

moxineodem fex domos cocliamofces.

Si autemad rempus antemeridianum, 12, coeli cuspides statuere uolueris, die stantiam propositi temporis'a meridie surripe 'a tempore per signum gradum & minuta Solis secundum modum præexpositum uerificato, aut a. 24. horis accommodatis (li alias surreptio fieri nequeat) deme etiam toties unitatem quoties dis Rantia temporis à meridie lenarium continet, & cu residuo intra tabulam domos rum, &age quemadmodum de tempore postmeridiano præcepimus, & in cersam notitiam sex cuspiducceli deduceris. Observandu tamen quod quotiescunce sempusfinaliter quærendi in tabula repertumnon fuerit, intrandum ellet cum temporeminoriillic reperto, & cum reliduo tempore, & differentija domorum elicies portiunculas domibus adificiendas, & sic rite omnia absolues. Sex domi bus quantum ad earum initia aut cuspides cognitis aliæ sex per diametralem oppolitionem in iplozodiaco qu'am facillime cognoscentur. Si pracisione omnie modam in coli domibus confruendis amas, Ioannis de Regiomonte directorium confule, sed plus te difficultas operis anget qu'ampræter utilitatem subtilie pcilio delectationis ingeret. Postremo, habitis initiis. 12, edium coelestium suscita protua industria figuram coeli quemadmodum iudices astronomiæ usitato erie gune ates depingunt. Cul ex Ephemeridiario infere (prout res ipfaexigit)loca planetarum, in hanc enim domum planetam quempiam intrudes que eius grae dum sub quo planeta decurrit in figura coelesti comprehendit: tande uaricinare effectus futuros, res natura fecretificas & profecto miraru digniffimas, Lectos Wale.
